Professional Summary

Computer Science undergraduate with hands-on experience in backend and full-stack software development using Java, Go, and modern web technologies. Experienced in building secure and scalable applications with Spring Boot, Go (Gin), React, PostgreSQL, Redis, and microservices architectures. Developed real-world systems involving RESTful APIs, event-driven communication, AI/ML services, and containerized deployments. Passionate about clean architecture, distributed systems, performance optimization, and building production-ready software solutions.

Technical Skills

Programming Languages: Java, Go, JavaScript, TypeScript
Backend Development: Spring Boot, Laravel
Frontend Development: React.js, React Native, Tailwind CSS
Databases & Caching: PostgreSQL, MySQL, Redis
DevOps & Cloud: Docker, GitHub Actions, AWS
Tools: Git, GitHub, Postman

Education

Bachelor of Computer Science **University of Ruhuna, Sri Lanka**
GPA: 3.67 / 4.00

Projects

Accident Reporting & Information System (ARIS) *Government Project / Ongoing*
React, TypeScript, Laravel, MySQL, Tailwind CSS
🐙 github.com/Chief-Ministry-Southern-Province/arish

- Architected an enterprise statutory accident reporting system for the Southern Provincial Health Sector, automating F.R. 104(3), 104(4), and 109 document workflows.
- Implemented a multi-stage approval engine featuring role-based authorization, digital signature verification, real-time WebSocket notifications (Laravel Reverb), and audit trail tracking.
- Developed a multilingual (Sinhala, Tamil, English) PDF generation engine with mPDF and an interactive analytics dashboard for loss evaluation, hotspot identification, and risk analysis.

Enterprise Resource Planning (ERP) System – Final Year Project

Spring Boot, Spring Security, JWT, Redis, PostgreSQL, React, TypeScript
🐙 github.com/ZentroThread

- Designed and developed a full-stack ERP system with secure JWT-based authentication and role-based access control using Spring Security.
 - Implemented Redis caching to improve application performance and reduce database load.
 - Developed a scalable React frontend using TypeScript and Zustand for efficient state management and maintainable UI architecture.
 - Designed and implemented RESTful APIs with Spring Boot and PostgreSQL for reliable backend data management.
-

Job Portal Microservices Platform

Java, Spring Boot, Apache Kafka, PostgreSQL, Docker, React, Vite

🔗 github.com/ThilinaRodrigo/job-portal-microservices - Backend

🔗 github.com/ThilinaRodrigo/jobfinderportal - Frontend

- Architected a distributed microservices platform leveraging Spring Cloud Gateway for centralized API routing, Eureka for service discovery, and JWT for Role-Based Access Control (RBAC).
- Engineered decoupled microservices (Auth, Job, Candidate, Employer, Notification) backed by PostgreSQL and integrated Apache Kafka for event-driven asynchronous messaging.
- Built a responsive SPA using React, Vite, and Tailwind CSS, implementing dynamic Axios HTTP interceptors for automated token management and session security.
- Containerized microservices environment using Docker and Docker Compose to ensure local parity and streamlined service orchestration.

AI-Powered Rice Leaf Disease Detection & Agri-Ecosystem

React Native (Expo), TypeScript, Go (Gin), Python, FastAPI, PostgreSQL

🔗 github.com/ThilinaRodrigo/Rice-Leaf-AI-App

- Engineered an end-to-end agricultural ecosystem featuring a cross-platform mobile client, Go backend, isolated Machine Learning service, and Vite admin dashboard.
- Trained and deployed a TensorFlow CNN model via an isolated FastAPI Machine Learning service to classify 5 rice crop disease categories with real-time confidence scoring.
- Architected a high-throughput Go (Gin) backend with PostgreSQL for multi-role authentication (JWT), marketplace operations, community forum, and AI chatbot history management.
